BRYSTON BP2-20 MM/MC Phono Stage

“In my estimation, the Bryston BP2-20 MM/MC is a top-flight example of what a phono stage should be.

Unlike some phono preamps that provide so much adjustability that they become almost glorified tone controls; the BP2-20 is focused on simply amplifying those tiny cartridge voltage inputs in the cleanest, most robust manner possible.

And while keeping distortion and noise levels impressively low it also manages to remain musical and full sounding with several different cartridge combinations.

Its design also has plenty of headroom, pretty much guaranteeing you will not find an LP groove big enough to overload BP2-20 regardless of the cartridge used.”
