Conclusion:

The Bryston BHA-1 headphone amplifier has proved thoroughly enjoyable. It is a serious, robust, full-size component that would be right at home in an audio rack. It can supply enough power through its balanced and single-ended outputs to drive even the most stubborn of headphones.

The BHA-1 is a quiet amplifier, with superb driver control and a neutral, clear presentation. It revealed sonic detail, in familiar recordings, I was never aware of.

To experience the BHA-1 is to become a Bryston fan!
